Individuals with Lower Limb Amputation

Do you have a leg amputation to one or both legs?
Are you over age 18?

If you answered yes to both of these questions, please consider calling our study coordinator to discuss participating in our lower limb research project.

Why are we doing this study? Researchers at the University of Pittsburgh are studying the effects of lower-limb amputation on balance.

What will I do in this research study?: You will participate in up to five study visits that will last up to 5 hours. Researchers will ask you to complete different tasks involving walking and balance. You will be compensated $50 per visit and will receive a parking validation voucher for each visit.

Please contact our research coordinator at 412-648-4035 for more information.
